

# 6 Strategies for AI Integration in Classroom Assessment

## 1 Be explicit about the role of AI in learning goals

*Example: If the learning goal is to write a research essay, be explicit that students can use ChatGPT as a research tool to identify key points for the essay*

1

## 6 Co-construct evaluations via assessment conversations

*Example: Invite students to comment on their performance and use of ChatGPT*

6

## 2 Design assessment criteria with AI in mind

*Example: Describe how ChatGPT is used across performance levels (how is level 1 performance different from level 3 performance?)*

2

## 5 Use authentic community-based tasks

*Example: Embed task in local community context and invite students to make community connections*

5

## 3 Engage students in feedback cycles & peer/self-assessment

*Example: Invite students to peer review their essays and comment on how they have used/modified their work based on ChatGPT*

3

## 4 Extend learning through performance tasks

*Example: Invite students to represent their essay ideas in an alternative modality (e.g, poster, sketch, podcast, etc.)*
